

VebeGo International BV gains insight about network security with OUTSCAN

As an international company active in the fields of cleaning, general technical services and personnel services, VebeGo International BV identified the need to continuously assess and monitor the risk exposure in their IT infrastructure.

PREVIOUS SOLUTION

Having originally depended on traditional methods of IT security such as firewalls and scanning individual computers for viruses, Jean Paul Beiten, Corporate Information Manager at VebeGo International BV, wanted to delve deeper to find out more about vulnerabilities on the VebeGo network and how it could affect the company's assets.

Beiten says, "At first we were curious to see what our network looked like from the outside, we wanted to know if and where we were vulnerable. Once we ran the first scans we immediately saw the added value. VebeGo is a group of companies and after seeing the OUTSCAN results we went on to introduce the product to the other local managers who then tested the product and were also happy with the results."

OUTPOST24 SOLUTION

OUTSCAN scans your perimeter which consists of the same Internet-facing devices that hackers target. With OUTSCAN, it is easy to detect vulnerabilities and manage remediation to prevent hackers from penetrating your network. The workflow tools support delegation of identified vulnerabilities and verification of successful remediation.

ABOUT VEBEGO INTERNATIONAL BV

VebeGo International BV is a private, family-owned holding company specializing in the services industry.

Based in Voerendaal, in the Netherlands, VebeGo is active in four primary areas: Cleaning and Facilities Services; Facilities Management; Personnel Services; Products and Systems.

"Once we ran the first scans we immediately saw the added value."

Jean Paul Beiten,
Corporate Information Manager,
VebeGo International BV

Once OUTSCAN was in place, VebeGo worked to set in place a timeline for taking action on certain vulnerabilities based on risk.

Each manager evaluates the reports and can easily see based on the colored charts and graphs how many high, medium and low risks exist. The managers are happy with the easy-to-read reports and the technical team is happy with the way the findings are presented.

"This is extremely valuable because technicians can take the reports and talk with the directors and managers about what risks exist and how to go about fixing the issues in what order to maintain functionality." states Beiten.

RESULTS / BENEFITS

What started as curiosity turned into an indispensable tool for VebeGo International management and technicians alike. Beiten adds "Outpost24 has shown me over the years that it is not just the technology that is important, but actually how the technology is used by the ones implementing it. The ones using it. That is what is important."

"This is extremely valuable because technicians can take the reports and talk with the directors and managers about what risks exist and how to go about fixing the issues in what order to maintain functionality."
